

The Winning Hand!

How to eliminate breakage in your finishing department?

Our New Patent Pending Deep Drive edge blocks works in conjunction with our LZFI-1 and LZFII-1 automatic deblocker units to deblock the lenses from the edge blocks with ease. Illustrated by the blue "Deep Drive" edge block shown in the collet, has two deep slots for positive engagement into the collets for greater gripping power.

The twist motion of the collets in our LZFI-1 & LZFII-1 automatic deblocker releases the lenses from the leap pads with no breakage of the lenses. You're the winner with Precision's Deep Drive Edge blocks and LZFI-1 & LZFII-1 Automatic Deblockers.

- ♣ Eliminate Breakage From Deblocking
